

CD t

Product Overview

An audiophile CD transport widely seen as the best CD transport in its class.

This entry level CD player offers the hi-fi enthusiast unprecedented performance for its price. It uses many of the top end components put into our flagship [CD Xt Signature](#), which is why this product is widely regarded as the best CD transport in its class, even outperforming its more expensive competitors.

The reason the CD t can deliver such unusual value is Cyrus's multi-award winning CD technology [Servo Evolution \(SE₂\)](#) which is able to read more data 'right first time' from a CD than any other CD system.

Further Information

As well as our unique [Servo Evolution](#) disc reading driver, the CD t houses many advanced components which make the sound it produces really stunning and impressive.

A multi-regulated power supply allows the Servo Evolution software to work with miniscule precision, pulling huge amounts of data from your disc and transporting that to a separate DAC without adding or taking away anything from the music itself.

To further ensure that the CD t produces a completely accurate sound, a complex re-clocking circuit with close tolerance crystal VCO is used.

The resulting sound is pure and full, and in tests it produces industry leading read error rates, which is why the CD t is often named the best CD transport in its price range.

Partner this fantastic CD transport with the [Cyrus 8 DAC](#) or [Cyrus 8 Qx DAC](#), integrated amplifiers and digital-to-analogue converters.

Technical Information

As with all of our products, the CD t can be connected to our other systems via our unique **MC-BUS** connectivity.

Outputs – SPDIF (RCA), TOSlink optical digital
