

High power-handling, high-output ACOUSTIMASS® enclosures that deliver pure, rich bass in a variety of professional system configurations and for many different applications.

Your business need

Full, natural sound without sacrificing space or aesthetics

Bass reinforcement for a variety of system components and configurations

Bass reinforcement in large venues even outdoor

High output with reliable performance

The BOSE® Solution

Patented ACOUSTIMASS® speaker technology delivers bass with no audible distortion. This makes it hard to locate the sound source, allowing you to conveniently place the ACOUSTIMASS® enclosure almost anywhere in the listening area, even out of sight.

The 502°B ACOUSTIMASS® enclosure is engineered to complement the BOSE® PANARAY® family of loudspeakers with the exception of PANARAY® LT, for which the 502°BEX has been specifically designed. The PANARAY® digital controller or plug-in equalisation cards provide proper signal processing to ensure full, natural sound for any system configuration.

BOSE® 502° BEX is designed primarily for use with BOSE® PANARAY® LT systems but can also be used outdoors to complement other loudspeakers in the PANARAY® range.

A 30.5 cm (12") woofer and a high temperature voice coil combine for high power handling, room-filling bass and dependable performance – performance that is backed by a transferable five-year limited warranty.
